

dimensions	15.4 x 50 x 50mm	
through-beam sensors	operating range	3.0m
retro-reflective sensors	operating range	up to 7.0m
dif. reflection sensors	sensing range	20 to 600mm

- ✓ dif. reflection sensors with background suppression
- ✓ retro-reflective sensors with polarizing filter
- ✓ simple adjustment
- ✓ high sensing ranges
- ✓ light-on and dark-on mode
- ✓ fast response time
- ✓ LED-display of the switch signal
- ✓ degree of protection IP67
- ✓ connection with M12-connector or cable

visible red light
robust metal housing

description

Optoelectronic sensors are indispensable components in all automated production processes. They are used in all applications where parts are to be detected, counted, measured or positioned in a way which does not involve contact and which is reliable and fast.

The devices feature a zinc diecast housing and are often used in connection with a PLC for automatic production processes and machines. For example, they detect objects made from metal, plastic, wood and paper. Transparent films can be detected with the **OR170120** retro-reflective sensor in a way which is clear, reliable and reproducible. Here, the teach-in function enables adaptation to changes to the environmental conditions.

With through-beam sensors, functional monitoring of the sensor is possible through the test input in the **OS170020** transmitter. For this, the operating voltage potential is applied to the corresponding contact.

Although the distance of the diffuse reflection sensor devices can be set using a mechanical setting unit, the high degree of protection (IP67) is maintained. Objects are reliably recogni-

zed, regardless of their color. The functional principle behind these sensing devices is based on the triangulation principle, in which the position of the object is determined by the angle of light reflected from it.

The sensors all work with visible red light and consequently, enable reliable and simple adjustment. The yellow LED display lights up if the output is securely switched. In the case of certain sensors, if the yellow LED flashes when the output is switched, the respective device is working without sufficient functional reserve, e.g. through soiling or maladjustment.

For avoiding reciprocal optical interference, the majority of devices are equipped with interference suppression. As a result, it is possible to mount sensor upon sensor without causing erroneous operations.

application examples

- ▶ presence check of different objects
- ▶ collision avoidance in feed movements
- ▶ control of object and stack heights
- ▶ limit switches, position switches and pulse generators

article-no.	OE170421	OS170020
operating range	3.0m	-
version	through-beam receiver	through-beam transmitter
connection	M12-connector	M12-connector

* receiver axis: 15mm

* transmitter axis: 26.5mm

TECHNICAL DATA

operating range	3.0m	-
output signal	pnp, light-on/dark-on mode	-
operating voltage	10 ... 30V DC	10 ... 30V DC
current consumption (w/o load)	≤ 17mA	≤ 30mA
output current (max. load)	200mA	-
voltage drop (max. load)	1.8V DC	-
transmitting element (pulsed)	-	LED, red light
wavelength	-	660nm
sampling frequency	500Hz	-
display (signal)	yellow LED	-
display (soiling)	yellow LED, flashing	-
sensitivity adjustment	potentiometer, 10 revolutions	-
input (function test)	-	operating voltage on contact 4
