

dimensions	75 x 75 x 10mm	
	105 x 105 x 10mm	
	150 x 150 x 12mm	
through-beam	ring size	10.6mm
		15.6mm
		20.6mm

- ✓ detects metallic and non-metallic objects
- ✓ no lateral diffusion
- ✓ robust metal housing
- ✓ easy mounting and high degree of protection
- ✓ switching state display by LED
- ✓ sensitivity adjustment via integrated potentiometer
- ✓ adjustable pulse stretching
- ✓ high switching frequency due to short response times
- ✓ connection with M8-connector

amplifier with dynamic or static output function

description

Optoelectronic ring light barriers have been designed to monitor the material flow of small parts such as screws or springs. Plastic parts or liquids (drops) can be reliably recognized as well. Material can also be detected when it is supplied through a transparent supply hose.

A light curtain is formed within the ring by several photoelectric sensors. The corresponding amplifier converts the interruption of one light beam into a switch signal. This guarantees the detection of very small objects above 1mm in diameter (for OY106000). The amplifier is available in both a dynamic and static version.

Using the dynamic amplifier parts can be detected, moving quickly through the ring (e.g. free falling objects). An advantage of the dynamic functional principle is the automatic adjustment in case of variable environmental conditions like soiling or scratching of the supply hose. Typical applications are counting tasks or in the feeding technology for automatic assembly machines.

The connection of a ring light barrier to a static amplifier allows slow or static conditions to be recognized in addition to fast movement sequences. The output stays in the connected mode, as long as material can be found in the active zone that needs to be detected. This version is used to control e.g. the presence of liquids in a transparent plastic hose.

It is possible to adjust the response sensitivity using the integrated potentiometer. The soiling of a transparent supply hose may be compensated this way.

A second potentiometer enables adjustment of the output pulse. Independently of the speed of the part to be detected the device can be adapted to the requirements of the connected control system.

application examples

- ▶ detection of e.g. screws, springs in transparent feedings
- ▶ detection of liquids, drops, air bubbles
- ▶ thread breakage monitoring

article-no.	OY106000	OY156000	OY206000
operating range	10.6mm	15.6mm	20.6mm
TECHNICAL DATA			
ring size	10.6mm	15.6mm	20.6mm
resolution	Ø 1mm in the center	Ø 2mm in the center	Ø 3mm in the center

This data sheet contains the standard versions only. Kindly request the availability of other output- and connection versions.

We will be pleased to supply the matching cable socket for your devices with connector. Please refer to the list in catalog chapter „accessories“ under „cable sockets **ipf**-SENSORFLEX®“ or search our website for „VK“.

Warning: Never use these devices in applications where the safety of a person depends on their functionality.

This data sheet as well as your personal contact can be found at www.ipf-electronic.com
