- ✓ robust metal housing
- ✓ easy mounting and high degree of protection
- ✓ compressed air connection for cleaning the optics
- ✓ removable cross arm
- ✓ switching state display by LED
- ✓ no / nc selectable
- ✓ adjustable sensitivity
- ✓ pulse stretching up to 150ms
- ✓ integrated amplifier
- ✓ high switching frequency due to short response times

**dynamic or static function  
impact and reflection protection**

#### description

Optoelectronic frame light barriers operate using the same principle as the through-beam sensor. A large number of transmitters and respective receivers have been integrated into the limbs forming a light curtain.

The integrated amplifier converts any interruption of a light beam into a switch signal. The frame light barrier is capable of detecting very small objects.

Either the dynamic or static function of the devices can be selected.

Parts which move quickly (e.g. in free descent) through the light barrier, are detected in the dynamic mode. Objects that are permanently within the frame or move very slowly, remain undetected. The output remains switched for the set pulse time only.

The static mode allows for a detection of slow-moving or static

conditions. The output remains activated for as long as the object to be detected stays in the active zone.

An integrated potentiometer allows for adjustment of the response sensitivity.

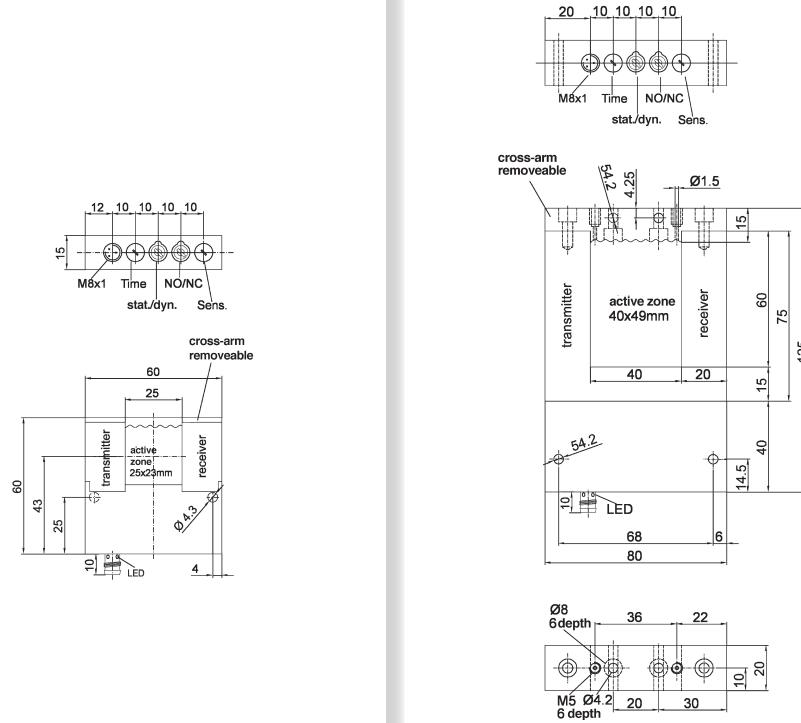

A second potentiometer enables adjustment of the output pulse width. Independently of the speed of the part to be detected the device can be adapted to the requirements of the connected control system.

The switching output function may be selected between normally open (no) and normally closed (nc).

#### application examples

- ▶ ejection checks on stamping machines or blanking presses
- ▶ presence checks
- ▶ linear measurements of wires or tubes

### connection

wire colors: bn = brown (1), bu = blue (3), bk = black (4)

This data sheet contains the standard versions only. Kindly request the availability of other output- and connection functions.

We will be pleased to supply the matching cable socket for your devices with connector. Please refer to the list in catalog chapter „accessories“ under „cable sockets **ipf**-SENSORFLEX®“ or search our website for „VK“.

Warning: Never use these devices in applications where the safety of a person depends on their functionality.

This data sheet as well as your personal contact can be found at [www.ipf-electronic.com](http://www.ipf-electronic.com)
